Tahweel Tech Solutions

Department: Operations | Owner: Reem Al-Harbi | Classification: Internal

Operations Policy - Service Delivery and Process Compliance

Purpose

This policy defines service delivery standards, change management procedures, and business continuity requirements for the Madar platform and other production systems operated by Tahweel Tech Solutions.

Service Level Targets

- Platform uptime target: 99.5% monthly availability for the Madar file-sharing and AI search platform.
- Support response time: Critical incidents acknowledged within 15 minutes, high-priority within 1 hour, standard requests within 1 business day.
- File sync latency: New or modified documents must be available for AI search within 10 minutes of upload, following the ingestion and embedding pipeline.

Change Management

- All production changes (infrastructure, application, or configuration) must be submitted as a Change Request and approved by the Operations Lead before deployment.
- Changes are deployed through the CI/CD pipeline (GitHub Actions) with automated health checks; a failed health check automatically halts the deployment.
- Emergency changes outside the standard window require verbal approval from the Operations Lead, followed by a retrospective Change Request within 24 hours.

Backup and Disaster Recovery

- Full backups of the Nextcloud data volume and PostgreSQL database are taken daily and retained for 30 days.
- Backup restoration is tested quarterly to verify recovery time objective (RTO) of 4 hours and recovery point objective (RPO) of 24 hours.
- Before any destructive operation (such as removing Docker volumes), an on-demand backup must be taken and verified.

Vendor and Escalation Management

Microsoft Azure is the primary infrastructure vendor under a support agreement guaranteeing a 99.9% SLA for core compute and networking services. Any vendor-side outage affecting the Madar platform is logged and tracked to resolution, with a summary reported to the Executive Committee if downtime exceeds 2 hours.
