Sales Strategy - Enterprise AI Solutions and Sovereign Cloud Expansion

Market Positioning

Tahweel Tech Solutions targets mid-to-large Saudi enterprises and government-adjacent entities seeking sovereign, self-hosted alternatives to foreign file-sharing and AI search platforms. The Madar platform is positioned as a secure, permission-aware alternative to public cloud services such as Google Drive and Dropbox, combined with natural-language document search.

Target Verticals

- Government and quasi-government entities requiring data residency within the Kingdom.
- Financial services firms subject to strict data confidentiality requirements.
- Large family-owned conglomerates with multi-department document governance needs.
- Healthcare providers requiring permission-segmented document access across departments.

FY2026 Sales Targets

- New enterprise logo target: 12 new clients for FY2026.
- Average contract value (ACV) target: SAR 650,000 per enterprise client.
- Pipeline coverage target: 3x pipeline-to-quota ratio maintained at all times.
- Q3 2026 closed-won revenue: SAR 2.1 million, against a quarterly target of SAR 1.9 million.

Sovereign Cloud Expansion Strategy

As part of the 2030 roadmap, the Sales team is building a dedicated go-to-market motion for the sovereign cloud offering, targeting government sector RFPs that mandate in-Kingdom data residency and NCA ECC-1:2018 compliance - both of which the Madar platform already satisfies through its Azure KSA region deployment and IT-Cybersecurity controls.

Pricing Tiers

- Starter: up to 50 users, single department, SAR 8,000/month.
- Business: up to 250 users, up to 5 departments with permission-aware AI search, SAR 28,000/month.
- Enterprise: unlimited users, full department segmentation, dedicated support SLA, custom pricing starting at SAR 65,000/month.

Competitive Positioning

Compared to public cloud file-sharing incumbents, Tahweel Tech Solutions differentiates on three fronts: full data sovereignty within Saudi Arabia, permission-aware AI search that never exposes unauthorized content, and complete audit traceability for every document access and AI query.
